The Plate Saver™, our innovative, patent pending, lighted license plate mounting bracket allows a license plate to be mounted above the standard trailer taillight or mounted on a trailer's rear gate. Federal requirements state that a license plate needs to be illuminated by a white light. Our Plate Saver lighted license plate bracket is the solution to the trailer owner who wishes to prevent damage and loss of their trailer plate by providing a mount that allows more clearance, flexibility with the mounting location and an illuminated plate that stays within federal regulations.

Utility trailers typically have a steel, plastic or rubber license plate mount that attaches below the taillight. This design allows for the plate to be illuminated by the taillight via a clear plastic lens on the bottom of the taillight. This method often limits the clearance of the trailer and causes the license plate damage or even loss due to contact with road or obstacles when maneuvering the trailer.

Incorrect mounting of the license plate occurs when the trailer owner moves the plate to a location above the taillight or rear of the trailer to protect the plate from clearance issues, but fails to illuminate the plate.

The Plate Saver™

This patent pending, lighted mounting bracket allows more clearance and flexibility with the mounting location. The white light illuminates the plate.

The Plate Saver™ Accessory Kit

This is built for utility trailers with a drop gate in the rear. Bracket built for utility trailers with a drop gate in the rear. Bracket wiring has a quick disconnect electrical plug allowing power to be unplugged if the gate needs to be removed. One end attaches to the Plate Saver bracket and the other end to the Plate Saver's grounding terminal and power connector. The Accessory Kit includes a 36 inch extension with quick disconnects at each end, as well as fastening hardware.

Cargo Hitch Carrier Application

Installs easily. Ensure your license plate is clearly visible and illuminated by using a Plate Saver™ when traveling with cargo on the hitch carrier.

* Accessory Kit Required.
