

Ehrman Industries, LLC

Weather-Resistant Tap Splice Connector

WARNING: Turn power off before installing or removing connector. All work should be done according to appropriate electrical codes. Use only with insulated copper wire. Do not strip insulation.

Copper conductors only.

Operating Temperature: 105 C maximum

VOLTAGE RATING: 600V maximum building wire: 1000V maximum in signs and lighting fixtures (luminaries).

CAUTION! Some connectors contain a sealant that may cause eye and skin irritation.

Installation Instructions:

1. Insert unstripped wire into body of connector. [FOR PIGTAIL CONNECTIONS: Insert both unstripped wires into same end of connector. Make sure wire tips are not exposed beyond other end of connector.]
2. Make connection with slip-joint pliers by driving “U” contact down flush with top of connector.
3. If applicable, close hinged top cover until latched. **IMPORTANT NOTICE:** Before using this product, you must evaluate it and determine if it is suitable for your intended application. You assume all risks and liability associated with such use.
